

Super Cup

This newly developed, high-quality gravity-feed cup designed for the PILOT Premium helps to make every spraying job as easy and pleasant as possible.

An added bonus!
Full-surface, easily removable filter insert that perfectly matches the gravity feed cup. This valuable filter is included with every cup.

Advantages

- Top-quality plastic
- High-gloss polished version for easy cleaning
- Lid and cup with special thread
- Large material outlet, excellent flow characteristics
- Cup filter included
- Optional: small cup filter insert

Technical data

Capacity: 600 ml
Cup measuring scale in ml or oz
Filters with 100 mesh (standard) or 225 mesh available
(adhesive spray guns are supplied without a filter)

Mix'n-Spray-Cup

All-in-one mixing and gravity-feed cup. No need for time-consuming refilling. Simply mix your material, fit the cup and you are ready to start working.
Capacity: 750 ml
Flat filter: 120 mesh or 70 mesh
Packing unit: 50 pieces

Tailor-made coating system

PILOT Premium with WALTHER PILOT pressure tanks, agitators and compressed air fittings – coating equipment at its best.

- Manual and automatic spray guns
- Material pressure tanks
- Paint mix tanks
- Agitators
- Spray booths, drying equipment

PILOT Premium

Quality without
Compromises

Green Gun

Dynamic, ergonomic design
and finest surface finishes
with HVLP^{Plus}

The Coatings Expert

Super Models

You have a choice of three versions – perfectly matched to your requirements:

PILOT Premium-HVLP: green air cap
 PILOT Premium-HVLP^{Plus}: blue air cap
 PILOT Premium (conventional spraying): silver air cap

Advantages

- New nozzle/air cap system for the finest atomisation and a high transfer efficiency
- Attractive, ergonomic design
- All wetted parts in stainless steel
- Solvent-resistant packing elements
- Needle packing adjustable from outside and replaceable
- Suitable for left-handed or right-handed spraying
- Gun body in forged aluminium, chrome plated
- Large material duct and cup connection
- Ring spanner, open-ended spanner and special gun grease included

The new recipe for success: spray gun technology with HVLP^{Plus}

Only WALTHER PILOT offers innovative HVLP^{Plus}-nozzle/air cap technology. HVLP^{Plus} combines the advantages of HVLP and conventional atomisation: to achieve the finest results while at the same time saving material. That makes the PILOT Premium a unique spray gun.

- High transfer efficiency — up to 30% less material used
- Spray finish that meets the highest demands.
- High work rate and delivery quantity. Extremely comfortable to use

Green Gun

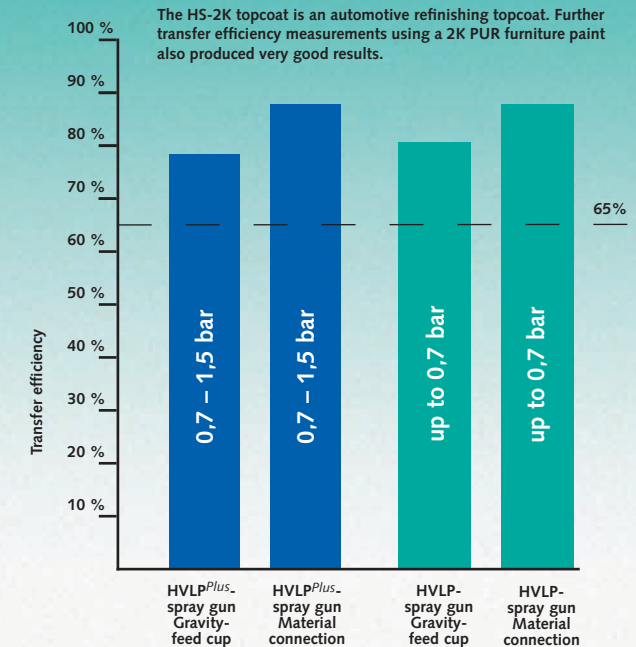

The blue HVLP^{Plus} air cap (left) guarantees a high transfer efficiency similar to HVLP (green air cap - right) but with finer atomisation.

The test results obtained by the Fraunhofer IPA prove that the transfer efficiency is far higher than the 65 % specified for HVLP (see Table, right). As a result, you not only protect the environment but also save a significant amount of expensive material. Your PILOT Premium will pay for itself in a very short time.

Test results to be proud of

According to the standard test procedure EN 13966-1, the following transfer efficiencies were measured by the Fraunhofer IPA (29.07.2009):

Spray gun	Spraying medium	Input pressure	Distance	Material consumption	Transfer efficiency
Premium HVLP ^{Plus} Gravity cup	HS-2K-topcoat	2,8 bar	180 mm	235 g/min	78 %
Premium HVLP ^{Plus} Material connection	HS-2K-topcoat	2,6 bar	180 mm	300 g/min	88 %
Premium HVLP Gravity cup	HS-2K-topcoat	3,2 bar	180 mm	210 g/min	81 %
Premium HVLP Material connection	HS-2K-topcoat	3,0 bar	180 mm	300 g/min	88 %

Technical data:

Nozzle/air cap systems: 0.3 / 0.5 / 0.8 / 1.0 / 1.2 / 1.5 / 1.8 / 2.0 / 2.5 / 3.0 / 3.5 mm ø
 Net weight of gravity feed gun: 470 g
 Net weight of material connection gun: 490 g
 Material pressure: max. 8 bar, atomiser pressure: max. 8 bar

Spraying materials

Paints and lacquers, adhesives, sealants, foodstuffs, separating agents.

Waterborne materials can be sprayed without problems.

VOC emission reduction

Due to the exceptionally high transfer efficiency, the Premium-HVLP^{Plus} and the Premium HVLP are excellently compatible with the requirements of European and overseas environmental legislation.
